## 2015 a Record Year for GAME Consultants

0

BY TRENCHLESS TECHNOLOGY STAFF ON MARCH 1, 2016

APPLICATIONS, BUSINESS/PEOPLE, CANADA, CANADIAN NEWS, CONDITION ASSESSMENT, NEWS

GAME Consultants closed a record 2015 and is looking forward to continuing that trend in 2016.

By the end of December 2015, GAME worked in seven of the 10 Canadian provinces, and in the following states: Massachusetts, New Hampshire, New York, Texas, Virginia, Wisconsin, Washington State and California.

The bulk of the work in the company's first two-and-a-half years has focused on small diameter live condition assessment and leak detection, with more than 400 insertions and approximately 35 km (20 miles). With GAME's large diameter live condition assessment and leak detection tool the company completed more than 25 insertions and approximately 10 km (8 miles) of data. As well as approximately 4 km (2.5 miles) of large diameter steel and CIPP water main inspections using customized condition assessment tools.

GAME Consultants founder Piero Salvo, P. Eng., M.Eng., attributes the company's success to its ability to listen, analyze and respond to a client's need.

"We listened as our clients were looking for us to provide trenchless engineering, additional and cost effective live or out of service inspection services. We analyzed our clients' requests with regards to feasibility of projects and evaluated how we could help," Salvo says. "We responded in force by providing site supervision for two important CIPP water main lining projects, site supervision for a CIPP sewer lining project, Trenchless Engineering, PACP analysis and recommendations, increased our fleet of specialized and customized condition assessment tools that allow us to inspect water pipes in excess of 1500 mm (60-in). In 2016, GAME Consultants will continue to demonstrate its steady growth and ability to cater to our clients' needs."
